

SAFE AND HEALTH WHEN USING PESTICIDES

Risks

Possible short-term health effects: poisoning, skin irritation, eye and skin damage

Potential serious health effects: liver/kidneys, nervous system, infertility and cancer

PPE for safety

Full-face mask, filter type A2P3

Full-body suit with hood

Liquid-proof gloves

Liquid-proof boots

Measures

1. Before starting work

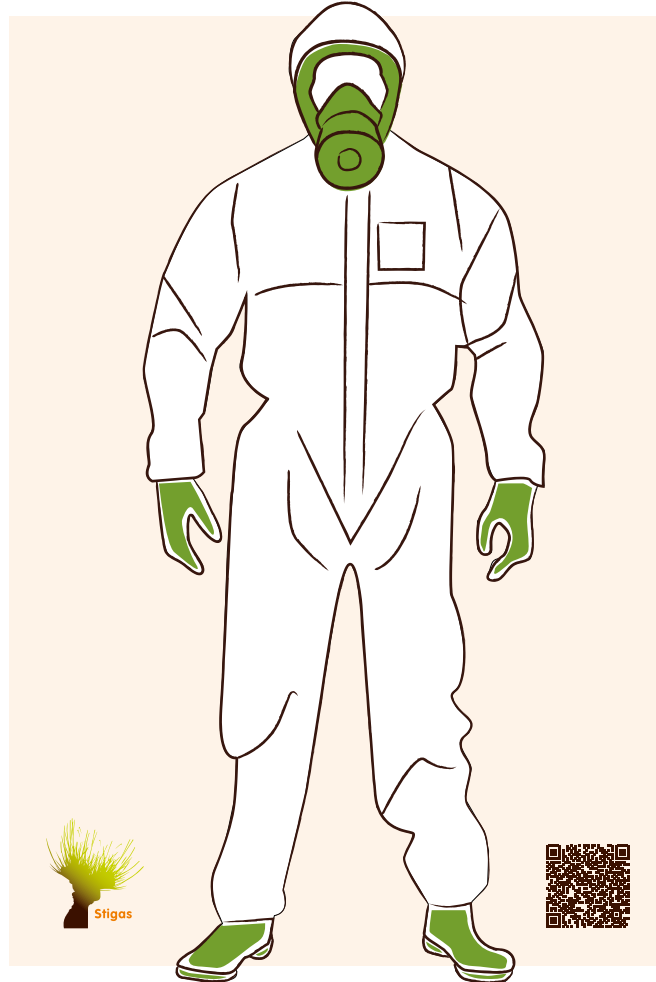

Make sure you have a valid spraying license

Receive instruction on how to work safely

Check that all PPE is present and in good condition

Call in the event of emergency or breakdown

2. Execution

Put PPE on and off correctly

Use products in accordance with labels and instructions

Use safe techniques (e.g. spray robot)

3. After completing work

- Write the usage time on the filter (max. 8 hours/1 month).
- Replace PPE in time in accordance with the instructions.

Clean the spray gloves inside and out

Wash the bodysuits or dispose of them as small chemical waste

Store PPE clean, cool and separate from chemicals. Store filters (A2P3) in an airtight container.

4. Extra

Perform an annual mask test

Participate in preventive medical examinations (PME)

If you have any questions about your own health, please consult the company doctor or attend the health and safety consultation hours
